

## Software Development & Outsourcing

## About Enformatic

Enformatic is a **custom IT solutions provider** offering software development, telecommunications, and networking services for customers in USA, Japan, and Europe.

We help our clients by developing solutions (for their own internal use or to be supplied to their customers) ranging from simple standalone applications to complex integrated systems utilizing various platforms and tools.

Our solutions find applications in aerospace, defense, semiconductor, chemical and other industries. We also service thousands of end consumers directly.

## Custom Software Solutions

Today, successful products require implementation of various technologies across multiple platforms. By employing innovative **design**, rapid **development** methodologies, and professional **implementation, training and support**, Enformatic is delivering modern solutions to complex problems across the globe ranging from stand alone applications to complex systems integrated with sophisticated hardware.

### Design

We offer services ranging from the basic graphical user interface (GUI) design, system-interaction design to the whole system information-flow design. However, the key in design is understanding. Only by understanding customers' requirements we can meet and even surpass their expectations. Yet we don't stop there. We anticipate customer needs and propose solutions addressing possible obstacles or challenges which might not be obvious otherwise.

Designs provided by Enformatic are intuitive, they look great and most importantly, they serve their purpose from the start. As a result, our clients benefit from minimal modification requests, wide user acceptance and high productivity immediately upon delivery.

### Development

We are experienced in development for PC, mobile and Internet platforms utilizing modern tools and widely accepted technological standards.

You can outsource to Enformatic development of the entire product or components of a large system. In either case, your organization will benefit from reduced TTM (time to market) and lowered costs.

### Implementation, Training and Support

Sometimes a self-installing solution is not enough and an on-site implementation and support is necessary. We have experienced professionals who can assist with all post-development services whether it involves implementation of disperse systems and platforms, integration with existing third-party systems, custom training or demonstrations.

## Return on Investment

Our clients have realized significant return on investment by engaging Enformatic in addressing their business needs. Customers do not perceive us as a cost; they see us as an asset upon which they can grow their businesses.

Investing in Enformatic, you invest in **expertise, quality** and **flexibility**.

### Expertise

We have professional staff with years of experience working for demanding customers. We speak English, we write code in English, and we comment and provide documentation in English. We thrive on innovation and challenging projects. Innovative solutions are our hallmark.

### Quality

The measure of quality is not just bug-free software, but the overall user experience based on intuitive interface, logical information flow, and features fulfilling all customers' requirements. To achieve that, we employ the best development practices, such as Agile Development techniques, user interaction/interface standards and Microsoft "Designed for..." standards, thus assuring familiar look-and-feel of the interfaces and commonly used functionalities.

### Flexibility

Working with Enformatic, you do not have to worry about time differences, long distance, or language barriers. We adjust to you. We leverage the time differences to expedite feedback and response time to your requirements. We establish teams and communication processes that meet your needs. Our project leaders work closely with you.

### Happy Customers

Testimonials are available from multiple customers:

*"...listening, learning how to use the product and forthcoming with solutions, in addition to writing an excellent code makes them a preferred software developer for Surface Optics Corporation."*

*Michael Beecroft, Manager of Engineering  
Surface Optics Corporation, San Diego, USA*

*"Enformatic has skills to design and make software, and knows how customers or we want to use it. We decided it was the best way to outsource with Enformatic when Otsuka started to develop own FTIR software."*

*Yoshihiro Osawa Ph.D., Production Manager  
Otsuka Electronics Co., Ltd., Osaka, Japan*

# Platforms & Tools

We offer services and solutions employing the following technologies:

## Windows

- VisualStudio 6.0/.Net
- (C++, C#, VisualBasic)
- ASP

## Windows CE and Windows Mobile

- eMbedded C++/VisualBasic
- VisualStudio .Net
- PlatformBuilder

## Linux

- C++
- PHP
- Perl

## Internet and Client-Server

- Linux, Windows
- Apache, Microsoft IIS
- Agavi, Symphony frameworks
- PHP, ASP.Net
- JAVA, JavaScript, AJAX

## Databases

- ORACLE
- Microsoft SQL Server
- PostgreSQL
- MySQL
